

**Department of Health Services
BOS COVID-19 / Monkeypox Update
08/09/2022**

COVID-19 Cases:

- California has had 9,983,370 confirmed cases and 92,889 deaths as of August 2, 2022. The case rate is 40.7 per 100K ([CA COVID-19 Dashboard](#))
- Sacramento County has had 332,565 total cases and 3,342 total deaths as of August 3, 2022. The case rate is 27.5 per 100k ([SCPH COVID-19 Dashboards](#))
- Case rates have decreased slightly over the past month.

COVID-19 Vaccination:

- Vaccination Rates:
 - In Sacramento County, 74.1% of the eligible population (6 months and older) has received at least one dose (compared to 79.8% statewide); and 68.4% of the eligible population is fully vaccinated (compared to 71.7% statewide).
 - 59% of those eligible for boosters have received them (compared to 58.4% statewide).
- Community Vaccination Clinics:
 - Vaccination clinics can be found by visiting <http://www.scph.com> and clicking the vaccination box. Here they can find a list of clinics each week hosted by SCPH, several of our partners, and find links to retail pharmacies and medical providers.
 - Residents can also visit myturn.ca.gov or call 2-1-1 to locate clinics near them. MyTurn allows residents to search for clinics by zip code.
 - Federal resources for available appointments: vaccines.gov; text your ZIP code to 438829; or call 1 (800) 232-0233.
 - Please see attached clinic schedule for July and August 2022 (136 total clinics)
 - Events by Supervisorial District:

July 1 – August 31, 2022

District 1	District 2	District 3	District 4	District 5
76	29	7	12	12

Monkeypox Outbreak:

- As of August 3, 2022, Sacramento County Public Health has identified **63** monkeypox cases in Sacramento County and CDPH reported 1,135 cases statewide.
- Monkeypox is a rare disease that is caused by infection with the monkeypox virus.
- Symptoms of monkeypox include; fever, headache, muscle aches, backache, swollen lymph nodes, chills, and exhaustion followed by a rash. The incubation period (time from infection to symptoms) for monkeypox is usually 7–14 days but can range from 5–21 days. The illness typically lasts 2–4 weeks.
- The risk of monkeypox to the general public is low at this time.
- The State of California has proclaimed a [State of Emergency](#) to support a statewide response to the outbreak.
- Some individuals may benefit from getting a two-dose monkeypox vaccine series (JYNNEOS) as a form of prevention.
- Vaccine supply is extremely limited and eligibility is restricted to individuals who meet certain [criteria](#) that put them at greatest risk for acquiring monkeypox at this time.
- As of August 3, 2022, SCPH has:
 - **received 3,198 doses;**
 - **administered 954 doses;** and
 - **redistributed 2,205 doses** to area medical providers.

An additional allocation of 1,520 doses is expected soon.

- Treatment is oral medication, TPoxx. UC Davis is mainly institution providing treatment – so far 34 individuals have initiate treatment. Other providers such as Kaiser coming on board.
